

The Micronet Advantage

Overview

- Microwave Point-Point (PTP), Wireless Point-Multipoint (PMP) and Satellite Earth Station facilities planning
- Interference analysis with existing facilities
- Wind Turbine farms avoid both planned and existing microwave and land mobile facilities
- Micronet has the software tools, strong technical expertise and long established record in spectrum management

Why Micronet

- Quality – Micronet has provided high quality planning and FCC licensing services since 1983 to a diverse customer base
- Small Size – Micronet provides a high level of service that can only be maintained when the company is small enough to be well managed
- Stability – While competitors get bought and sold and bought and sold, Micronet is run by the original founder

Microwave Communications

- Micronet is an FCC authorized supplier of 70-80-90 GHz microwave registrations
- Micronet has been active in the National Spectrum Management Association (NSMA) for twenty five years
- Micronet has by far the most experienced, and competent microwave planning team in the industry

Satellite Communications

- Micronet is a preferred vendor by numerous C-Band transportable uplink operators
- The firm has the expertise to support earth station clients with the full range of frequency coordination and FCC licensing services
- Micronet also has strong link analysis and satellite network design experience on the staff

Independence

- Micronet is closely held, and completely independent of parent company objectives and strategies
- Micronet has no commitments to promote any one vendor's equipment over another
- Micronet clients get recommendations based solely on technical evaluations of each situation

Recommendation

- Try Micronet – The only way to validate the assertions in this presentation is to find out for yourself
- Even if you have strong ties to another planning company, there is no downside to multiple qualified planning companies competing for your business
